## CMAX Clinical Research Pty Ltd

### Company Description

CMAX Clinical Research is a clinical research service provider with a custom-built, dedicated, self-contained, 50-bed clinical trial facility which specialises in Phase I-II clinical research, including first-time-in human studies. CMAX also participates in Phase III-IV studies as an investigative site. CMAX has over 24 years' experience, making it Australia's first established dedicated Phase I facility, and has strong relationships with pharmacologists and medical experts across a wide variety of therapeutic areas. CMAX moved to brand facilities in April 2016, adjacent to Adelaide's new BioMed City.

CMAX has seen an increase in the number of requests received from Chinese companies, and there are a number of Chinese Sponsor companies with studies currently in clinic at CMAX. Australia's efficient ethics approval system and attractive R&D incentive, combined with CMAX's strong track record and quality portable data production, makes Adelaide a perfect choice for the conduct of your clinical trials

### Pipeline and Developments

Experts in the conduct of early phase clinical research in Australia.

Take advantage of the efficient timelines and the R&D financial incentives on offer when conducting research in Australia.

### What we are looking for:

Pharmaceutical, biotechnology and device companies who are interested in conducting clinical research in Australia, particularly early phase clinical research.
