Patheon

Company Description

Patheon, part of Thermo Fisher Scientific, provides end-to-end pharmaceutical services to support the entire biotechnology and pharmaceutical lifecycle. Thermo Fisher's pharma services solutions helps customers accelerate innovation and drive productivity in the drug development and commercialization process – from small and emerging to large biotechnology and pharmaceutical companies for both large and small molecules.

Patheon's facility in Brisbane, Australia, supports clients to undertake large-scale mammalian-based cGMP manufacturing of biologics. Many of our client's utilizing our Brisbane facility are also accessing the Australian R&D Tax Incentive, which provides up to a 43.5% cash refund to eligible companies for costs incurred on manufacturing activities. By applying for an Overseas Finding under the R&D Tax Incentive, clients are also claiming costs incurred outside of Australia for process development and drug product activities (such as fill and finish) at Patheon sites in the US and Europe. Capital accessed through the R&D Tax incentive provides valuable source of non-dilutive funding for companies.

Pipeline and Developments

What we are looking for:

We are looking to assist companies and organizations needing assistance in outsourcing their biopharmaceutical drug development and manufacturing activities. We are able to assist companies from supporting pre-clinical and clinical material supply needs through to commercial manufacturing.
